

HOW TO MAXIMIZE AC EFFICIENCY & CUT COOLING COSTS

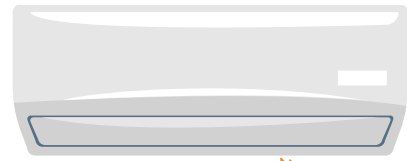

Save energy and stay cool this summer with strategic home upgrades from Kearney's NATE-certified HVAC technicians serving North Shore, MA and Seacoast, NH areas.

1

AC REPLACEMENT

If your AC is old or frequently needs repairs, getting a new air conditioner or heat pump can dramatically lower your cooling costs.

New air conditioners and heat pumps are eligible for Mass Save and NHTSaves® rebates.

2

MINI SPLIT INSTALLATION

Ductless heat pumps deliver efficient, zoned cooling without the energy loss of ductwork. Kearney specializes in installing high-performance mini split systems, perfect for hard-to-cool rooms or whole-home comfort.

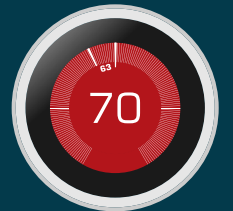

Mini splits are eligible for Mass Save® rebates up to \$10,000.

3

INSTALL A SMART THERMOSTAT

Upgrading to a smart AC or heat pump thermostat offers automatic temperature adjustments, remote access, and energy usage insights, seamlessly integrating into your home comfort routine.

4

CHANGE YOUR AIR FILTERS

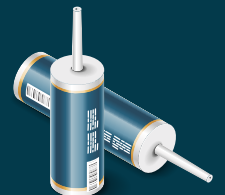

Replace your air filters every 60–90 days to maintain airflow and improve AC efficiency. Don't forget to also schedule professional maintenance every year to keep your system running at peak performance and prevent costly repairs.

5

OPTIMIZE HOME EFFICIENCY

There are several home performance upgrades that can help lower your energy usage, such as insulation and air sealing upgrades.
